

Westlake Pipe & Fittings Sets a New Standard in the Industry

Built to Deliver More

Westlake Pipe & Fittings Wichita Falls, Texas facility adds 190,000 sq. ft. of advanced PVCO manufacturing capacity, bringing PVCO lines to U.S. production. The expansion leverages the region's strategic geographic location to better serve customers across North America.

Uncover PVCO's Full Performance-Enhancing Capabilities

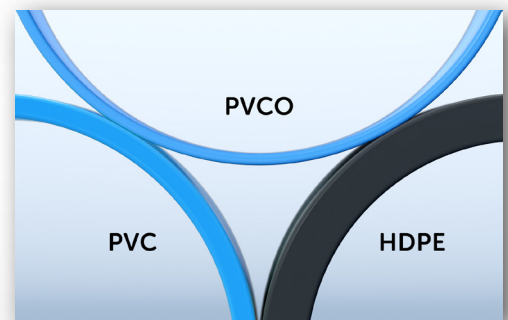

PVCO builds on the success of PVC, emerging as a next-generation solution that offers a stronger, more flexible and highly durable pipe. What sets PVCO apart from standard PVC is the way it's made. By stretching the pipe during manufacturing, the molecules become tightly aligned - creating a structure that distributes pressure more efficiently. The result is a pipe that's:

- > Much stronger, without being thicker or heavier.
- > More flexible, so it can handle shifting soil.
- > More resistant to impact, so it's less likely to crack during handling or backfill.
- > Higher hydraulic efficiency, means a larger internal diameter, allowing for better flow rates or lower energy costs in pumping.

Ultra-Tough, High-Strength

AquaMax® PVCO IPS	
6", 8", 10", 12"	IPS 200 PSI ASTM F1483
AquaMax® PVCO	
6", 8", 10", 12", 16", 24"	AWWA C909 PC 235
6", 8", 10", 12"	AWWA C909 PC 305

Developing the *Future* of PVC pipe & fittings

Westlake Pipe & Fittings reinforces its commitment to innovation with a substantial investment in state-of-the-art PVCO manufacturing. Using industry-leading, cutting edge technology PVCO sets the new standard. The innovative material streamlines the assembly process while delivering exceptional performance and a reduced environmental footprint.

Your *Success* is our Priority

Our distribution centers carry inventory aligned with regional needs, ensuring availability of standard products and frequently requested parts. That's how we help your projects stay on schedule.
